Hazardous Waste Management Program Guidebook

Revised 12/5/14

Table of Contents

1.0 Introduction	pg.1			
2.0 Responsibilities				
3.0 Procedures				
3.1 Hazardous Waste Determination				
3.1.1 Characteristic Hazardous Waste	pg.4			
3.1.2 Listed Hazardous Wastes	pg.5			
3.1.3 Restrictions				
3.2 Satellite Accumulation of Hazardous Waste	pg.7			
3.2.1 Accumulation Areas	pg.7			
3.2.2 Requirements for Waste Containers	pg.8			
3.2.3 Segregation of Hazardous Wastes	pg.8			
3.2.4 Special Handling	pg.10			
3.2.5 Pickup for Full Waste Containers	pg.10			
3.2.6 Weekly Inspection of Accumulation Areas	pg.11			
3.3 Other Waste Requirements	pg.11			
3.3.1 Biohazardous Wastes	pg.11			
3.3.2 Radioactive Wastes	pg.11			
3.3.3 Mixed Wastes	pg.11			
3.3.4 Ethidium Bromide	pg.12			
3.3.5 Photograhpic and X-ray Fixer Waste	pg.12			
3.3.6 Spray Cans	pg.12			
3.3.7 Reagents Used in Biological Procedures	pg.12			
3.3.8 Broken Glass	pg.12			
3.4 Empty Containers	pg.13			
3.5 Waste Minimization	pg.13			
3.5.1 Source Reduction	pg.13			
3.5.2 Recycling	pg.15			
3.5.3 Process Modification	pg.16			
3.6 Emergency and Spill Response	pg.16			

3.6.1 Chemical Spill Emergency Procedures	pg.17
3.6.2 General Emergency Procedures	pg.20
<u>3.7 Training</u>	pg.20
4.0 Document Management	pg.21
5.0 Associated Documents	pg.21
Appendix A	pg.22
Appendix B	pg.24
Appendix C	pg.26
Appendix D	pg.86

1.0 Introduction

Hazardous waste is strictly regulated by the Environmental Protection Agency under the 1976 Resource Conservation and Recovery Act (RCRA). This Act mandates a "cradle-to-grave" system (i.e. from the laboratory to complete destruction) for managing hazardous waste and applies to those who generate, store, transport, treat, recycle, or dispose of hazardous waste. The purpose of the Act is to protect human health and the environment from improper waste management practices. RCRA regulations are found in the 40 Code of Federal Regulations (CFR) Parts 260-279 and can be accessed at the United States Environmental Protection Agency (USEPA) website (www.epa.gov).

At first environmental laws were mainly focused on industry, which generates the largest portion of hazardous waste. In 1986, however, amendments to RCRA extended the law to cover most colleges and universities. This was done in response to public concerns about pollution from the mismanagement of even small quantities of hazardous waste. Although not comparable in volume to industry, academic institution produce a large variety of hazardous waste, creating numerous waste management problems. In addition to chemistry laboratories, hazardous waste is routinely produced in areas such as biology, geology, art, printing, drama, and the physical plant.

There are specific regulatory requirements for individuals who generate and accumulate chemical waste requiring disposal. Generators are legally and morally obligated to dispose of hazardous waste in a manner that will minimize damage to health and the environment. This effort requires the cooperation and commitment of workers, departments, and top management. It is the practice of Radford University to provide generators with a safe and appropriate means of managing hazardous waste. This will normally be done at no cost to generators.

An overview of the RU hazardous waste management procedures is presented in this document. The procedures outlined in this document are designed to promote:

- Safe handling of wastes to prevent spills and other accidents
- An efficient disposal process for all employees at RU
- Compliance with all applicable regulations governing hazardous wastes

Implementation of these procedures requires the cooperation of faculty, staff, and students.

The purpose of this manual is to provide the following concise and direct information:

- Hazardous waste requirements by regulatory agencies
- Hazardous waste determination
- Hazardous waste accumulation, storage, and pickup procedures
- Procedures for empty hazardous material and waste containers
- Waste minimization procedures
- Emergency and spill response procedures
- Training requirements

Every lab at RU is subject to unannounced inspections by the USEPA and the Virginia Department of Environmental Quality (DEQ). A single violation can result in costly fines.

Any questions should be directed to Environmental Health and Safety (EHS) at 540-831-7790.

2.0 Responsibilities

Individuals who generate hazardous waste are responsible for ensuring that their waste is managed properly. Chemicals must be disposed of in compliance with EPA, RCRA, and DOT regulations. Non-compliance with these regulations could result in fines and legal action. Fines of \$37,500 per incident per day are possible for the institution, and individuals may be held criminally and civilly liable for violating waste management regulations, up to 5 years in prison and/or \$50,000 fine per incident per day. (See http://www2.epa.gov/enforcement/rcra-corrective-action-enforcement-authorities and http://www2.epa.gov/

EHS functions both in an advisory and consultative capability, and as a service organization for the hazardous waste management program at Radford University. EHS shall:

- Coordinate the comprehensive hazardous waste management program
- Ensure all hazardous waste permits are obtained and maintained current
- Operate a campus-wide hazardous waste collection service which provides for the safe and timely collection/removal of hazardous materials
- Manage applicable disposal service contracts
- Prepare and submit regulatory reports and fees as applicable
- Provide training to individuals who handle hazardous waste or inspect accumulation areas
- Coordinate the waste minimization program
- Assist academic personnel (customers) with compliance questions and problems to continuously improve campus compliance

Faculty, staff, and students are responsible for complying with the regulations and practices promulgated as a result of federal and state legislation, university policies, and established guidelines. In addition, faculty and staff are responsible for ensuring employees and students are aware of and properly implementing safe handling and storage procedures for hazardous materials and wastes. Generators (e.g. faculty, staff, or students who produce hazardous waste) can dispose of hazardous waste in a responsible manner by ensuring that:

- Hazardous waste is disposed of by legal and safe means.
- Absolute minimum quantities are produced.
- Non-hazardous or the least hazardous chemicals are used.
- Hazardous waste is collected in proper containers.
- Hazardous waste is correctly identified and labels are properly completed.
- Only compatible chemicals are mixed in a common container.

- Waste is temporarily stored in an acceptable manner in a satellite accumulation area.
- EHS is notified for a pick-up in a timely manner.

3.0 Procedures

Disposal of hazardous waste using sinks, intentional evaporation, and general trash cans is prohibited by law. Dilution of a waste is not a legitimate form of disposal. RU laboratory personnel must abide by strict state and federal waste disposal requirements Use the following information to make sure you have identified all hazardous waste you generate and dispose of it properly.

3.1 Hazardous Waste Determination

USEPA explicitly describes the requirements:

1. You must determine if you are a generator of hazardous waste. USEPA defines a generator in 40 CFR 260.10 as, "Any person, by site, whose act or process produces hazardous waste identified or listed in Part 261 or whose act first causes a hazardous waste to become subject to regulation."

The first things you need to know is "Who is a Generator?" Within the definition presented here, there are several "key words" that need some explanation:

- <u>Person</u> (40 CFR 260.10) RCRA defines a "*person*" very broadly to mean an individual, trust, firm, joint stock company, federal agency, corporation, partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body. For Radford University, a "*person*" would be a Principal Investigator (PI) or Supervisor, lab worker, or lab student.
- <u>Site</u> while "site" is not specifically defined, the definition of the term "on-site" (40 CFR 260.10) talks about the same or geographically contiguous property. For the University, the campus (as is shown on a campus map) is considered a site.
- <u>Produces a Waste</u> as it implies, those whose act or process produce a waste are generators of the waste. At the University, the "person" that would produce the waste would be respective PI or Supervisor, lab worker, or lab student that generates the waste.

Note that the EPA definition of generator provides no exclusion for infrequent or accidental waste generation. If you are not a generator, you can become a generator if you spill a product which is a hazardous waste when discarded. Understanding the definition of *generator* will help you to better understand when and how your activities are regulated by law.

2. A generator must determine if the waste is a solid waste. According to the USEPA, a solid waste **does not** have to be a waste in a solid state of matter. A "solid" waste can be either solid, liquid, or a compressed gas and is specifically defined as:

"Any discarded material that is:

- <u>Abandoned</u> through (1) disposal, (2) burning or incineration, or (3) <u>accumulation, storage, or treatment;</u> or
- Recycled; or
- Inherently waste-like (dioxins and furans)
- And is not excluded"

Abandoned Chemicals

Many laboratory waste generators <u>accumulate</u> or <u>store</u> chemicals which have value, but over time become "forgotten." When the PI or Supervisor fails to <u>manage</u> and <u>maintain</u> their chemicals (containers corrode, labels fall off, labels yellow with age, etc.) the chemicals, by USEPA definitions, become "<u>abandoned</u>." An abandoned material is considered discarded, and is therefore a solid waste. MANAGE OR DISPOSE OF ABANDONED CHEMICALS IMMEDIATELY

3. If it is a solid waste, a generator must determine if the waste is a hazardous waste.

All wastes generated at the University must be characterized to determine whether they are a hazardous waste. Once you have a waste, it can be defined as a Hazardous Waste by two different means:

- A. Characteristic
- B. Listed

3.1.1 Characteristic Hazardous Waste

Most wastes generated in laboratories will be hazardous due to one of the four characteristics discussed below. If there is doubt as to whether your waste meets one of the four characteristics, EHS requires it to be handled as hazardous waste.

A waste is hazardous if it exhibits any one of the four characteristics of a hazardous waste: Ignitability, Corrosivity, Reactivity, or Toxicity.

CONTACT EHS to make a definitive hazardous waste determination. Assume that all chemical wastes are hazardous until a definitive determination can be made. This includes low concentration wastes or chemicals where you are unsure of the properties. *If you have any questions, contact EHS at 540-831-7790 for assistance.*

The following are the four characteristics and a few examples of common wastes at the University:

<u>Ignitable</u>

- Flammable liquids flashpoint <140°F Alcohols, Benzene, Toluene, Xylene
- Flammable solids solids that ignite easily and burn vigorously
- Oxidizers Nitrates, Perchlorates, Bromates, Permanganates, Peroxides, Iodates
- Organic Peroxides Benzoyl Peroxide, Methyl Ethyl Keytone Peroxide
- Ignitable compressed gases Butane, Acetylene, Ammonia

Corrosive

- Aqueous liquids with $pH \le 2$ or $pH \ge 12.5$ or other liquids capable of corroding steel at a rate of > 6.35 mm (0.250 inches) per year at a test temperature of 55°C (using an ASTM test procedure)
 - Inorganic acids Hydrochloric Acid, Sulfuric Acid, Nitric Acid, Perchloric Acid, Phosphoric Acid
 - Organic acids Formic Acid, Lactic Acid
 - Bases Hydroxide Solutions, Amines

Reactive

- Materials which are normally unstable and readily undergo violent change, react violently with water, form potentially explosive mixtures with water, form toxic gases, vapors, or fumes when mixed with water, capable of detonation or explosive decomposition if subjected to a strong initiating source or heated under confinement, or capable of detonation or reaction at standard temperature and pressure
 - Sulfides and cyanides
 - Peroxide formers Ethers, Potassium Amide, Sodium Amide, Vinyl Acetate, Tetrahydrofuran
 - Alkali metals Sodium, Potassium, Lithium
 - o Dinitro and trinitro compounds Picric Acid
 - Carbonyl compounds
 - o Isocyanates
 - Perchlorate crystal formers Perchloric Acid

<u>Toxic</u>

The USEPA specified a selected group of eight (8) heavy metals, ten (10) pesticides, and twentytwo (22) organic chemicals as classified as hazardous due to their toxicity characteristic (Appendix A). Any detectable amount of these chemicals must be identified on the Hazardours Waste label.

In addition, wastes that exhibit the following toxicity are considered hazardous wastes:

- An acute oral LD50 less than 5,000 mg/kg
- An acute dermal LD50 less than 4,300 mg/kg
- An acute inhalation LC50 less than 10,000 ppm as a gas or vapor
- An acute aquatic 96-hour LC50 less than 500 mg/L
- Waste that pose a hazard to human health or environment because of its carcinogenicity (carcinogen, mutagen, teratogen), acute toxicity, chronic toxicity, bioaccumulative properties, or persistence in the environment

3.1.2 Listed Hazardous Wastes

The USEPA has promulgated a list of chemicals found in 40 CFR 260-279 that are automatically determined to be a hazardous waste. If your waste is a chemical on the list, *it is a hazardous waste*. There are a substantial number of chemicals found on these lists. If you do not have a copy of these lists, one can be obtained by calling EHS at 540-831-7790. Also, you can refer to Appendix C. **CHECK THIS LIST FOR YOUR WASTE MATERIAL.** If it is on the list, treat it as a hazardous chemical waste. If you don't see your material on this list, determine if it meets any of the characteristics listed in the previous section, above. If your waste meets any of those characteristics, it is a hazardous chemical waste and must be handled according to the instructions given in this guidebook.

CONTACT EHS to make a definitive hazardous waste determination. Assume that all chemical wastes are hazardous until a definitive determination can be made. This includes low concentration wastes or chemicals where you are unsure of the properties. If you have any questions, contact EHS for assistance at 540-831-7790.

3.1.2.1 Acute Hazardous Waste

Some wastes are on a sub-list of what the USEPA calls "acutely hazardous wastes" (also called "P-listed" wastes because their USEPA waste numbers all start with a "P" for "poison"). The acutely hazardous wastes are specifically identified in Appendix C by name. Wastes containing these chemicals are limited to one total quart per accumulation area [your laboratory].

3.1.3 <u>Restrictions</u>

Virginia Hazardous Waste Management Regulations apply to the generation, storage, treatment, transportation, and disposal of hazardous waste. Radford University is classified as a "generator only." Under these regulations individuals who generate hazardous waste are prohibited from:

- Treatment of a hazardous waste except as part of an on-going process at the point of generation (e.g., neutralization as the last step in a laboratory experiment). Acids and bases cannot be collected in a common container and neutralized.
- Transportation of any hazardous waste from the generating facility (Radford University) except through a licensed disposal firm. Transportation to waste storage facilities on campus is restricted to properly trained individuals.
- Discarding of hazardous waste in the general refuse, storm drains, or by burning, burial, sale, giveaway, or any route other than that provided by the waste disposal service. Chemical exchange between university departments is encouraged.

- Biological, radioactive, and asbestos waste must be handled separately. Please call EHS at 540-831-7790 for proper procedures. Radioactive waste shall not be mixed with general chemical waste.
- Chemical mixtures from laboratories are acceptable as waste, however, ensure that only compatible chemicals are poured into common containers.
- Disposal of hazardous waste in the sanitary sewer is prohibited unless steps are taken to render the material non-hazardous. Toxic, flammable, organic solvents, noxious, or lachrymatory chemicals cannot be disposed of in the sink. Strong acids and bases must be neutralized to pH 5.0-10.5 to be in compliance with local wastewater regulations however, acids and bases can only be neutralized as part of an ongoing process (such as the last step in a procedure).
- Generally, limited quantities of some wastes can be disposed of in the sanitary sewer. In general, only water soluble, non-toxic substances may be poured down the sink. The university must comply with local regulations regarding what can be poured into the sewer system. Permission must first be obtained from the local sewer authority. *Contact EHS before disposing of any chemicals into the laboratory sink. At the time of this documents publication, there has been no approval for drain disposal for any chemical wastes.*

3.2 Satellite Accumulation of Hazardous Waste

Ten Golden Rules of Hazardous Waste Accumulation:

- **1.** Use only collection containers that are capable of safely storing the waste and that are in good condition.
- 2. Place supplied "Hazardous Waste" labels on all containers, indicate the contents and the nature of the hazard, as soon as hazardous waste is first added. Position the containers so that the waste labels are visible (face forward).
- **3.** Keep the waste container closed, except when adding waste.
- 4. Store all liquid containers in secondary containment.
- **5.** Segregate containers, keeping incompatible wastes, radioactive wastes, and regulated medical wastes separate.
- 6. Maintain ten percent free space in waste containers to allow for expansion.
- 7. Conduct weekly inspections of hazardous waste accumulation area and maintain an inspection log.
- **8.** Submit the completed Request For Hazardous Waste Disposal form to EHS when the containers are 90% full. Forms are available at: www.radford.edu/ehs
- 9. Attend and document all annual training for all persons generating hazardous waste.
- **10.** Post the name and phone numbers for responsible person to contact 24 hours a day in case of an emergency.

Regulated medical waste can be picked up by either contacting your latest approved contractor for disposal services or by contacting EHS at 540-831-7790.

3.2.1 Accumulation Areas

Generators may accumulate up to a <u>total</u> of 55 gallons of hazardous waste, or a total of *one* (1) *quart of acutely hazardous waste*, <u>**at or near the point of generation**</u> [your laboratory], provided that the waste:

- Remains under the control of the PI or Supervisor and their assistants
- Containers are closed and in good condition
- Contents are marked on the outside of the container

Hazardous wastes must not be transported outside your laboratory by anyone other than EHS personnel. Hazardous waste must be transported directly from you laboratory accumulation area to the RU Hazardous Materials Storage Building. EHS is responsible for and maintains the storage building in accordance with applicable regulations.

3.2.2 <u>Requirements for Hazardous Waste Containers</u>

- Chemicals for disposal must be placed in a sealed container, preferably with a screw type cap. Containers with cracked or corroded caps, paraffin, rubber, cork, or glass stoppers are not acceptable.
- Hazardous waste containers must be labeled with a hazardous waste label as soon as waste is first added
 - Follow instructions on the back of the label to guide you in filling out the label. Labels must be completely filled out, *except for the "DATE WHEN FULL*"
 - **BY LAW**, chemical symbols, abbreviations, and/or formulas are not permitted as means of identification
 - Do not omit the cation, or anion name for aqueous solutions of salts
 - **Do not** use "Exp. #..." or "Lab #..." as a means of identification
 - For any questions, call EHS at 540-831-7790
- Hazardous waste containers must be compatible with their contents
 - Do not store corrosive or halogenated solvent wastes in metal containers
 - Do not store waste hydrofluoric acid in glass containers
 - Do not store waste organic solvents in plastic containers
- Hazardous waste containers must be <u>kept closed</u>, except when waste is added. Use a container with a **flat bottom**. Most common problems found with containers:
 - The funnel is left in open container
 - An open container is left in a fume hood
 - DO NOT USE stoppers or corks! Use a screw top lid
- Hazardous waste containers must be leak-proof and free of exterior contamination
- An inventory log must be maintained for each hazardous waste container (see Appendix D).
- Wipe down containers prior to requesting pickup by EHS
 - Hazardous waste containers should be in secondary containment
 - Secondary containment can be any container or tray that will hold 110% of the volume of the largest waste container stored within the secondary containment, and should be compatible with the hazardous waste
 - Secondary containment will hold any waste chemical spills or leaks from the waste containers within it

- Secondary containment also is used to segregate hazardous wastes that are incompatible, such as waste acids and bases
- Lab trays and dishpans are frequently used for secondary containment in laboratories

3.2.3 Segregation of Hazardous Wastes

- Chemical Hazardous wastes must be segregated (stored separately) from incompatible chemical wastes, radioactive wastes, and regulated medical wastes
- Chemical wastes should be accumulated and segregated by the following general groupings:
 - **Mineral (Inorganic) Acids** Examples: hydrochloric acid, sulfuric acid, phosphoric acid, boric acid, and hydrobromic acid
 - **Oxidizers** Examples: bromic acid, perchloric acid, chromic acid, nitric acid, many perchlorates, permanganates, bromine, chlorine, fluorine, silver nitrate
 - Oxidizers should not be stored directly on wooden shelves or on paper shelf liners, spills may react and ignite spontaneously
 - Perchloric acid presents special hazards; it must be isolated from oxidizable materials and dehydrating agents
 - Hypochlorite solutions (e.g. bleach) are oxidizers; however, they will release chlorine gas on contact with acids, so store them separately
 - **Bases/Caustics** Examples: aqueous ammonia, ammonium hydroxide, potassium hydroxide, and sodium hydroxide
 - **Flammable Non-Halogenated Organic Solvents** Examples: acetone, methanol, isopropyl ether, benzene, and tetrahydrofuran. If space is limited, laboratories may wish to store these flammable organic wastes solvents in flammable storage cabinets
 - **Halogenated Organic Solvents** Examples: methylene chloride, carbon tetrachloride, tribromoethane
 - **Organic Acids** Examples: acetic acid, butyric acid
 - **Highly Toxic/Carcinogenic** Examples: formalin/formaldehyde, ethidium bromide, sodium azide, acrolein, arsenic pentoxide, pentachlorophenol, hydrazine, botulinum toxin, acrylamide, methyl isocyanate, phorbol esters
 - Mercury/Mercury Compounds
 - **General "Dry" Lab Chemicals** Examples: This would include many of the relatively innocuous or unreactive solid materials commonly found in laboratories
 - Gases Segregate waste compressed gases according to hazard class.
 - Acutely toxic and toxic gases should be stored in gas cabinets or fume hoods
 - Cylinders should be chained or strapped to a substantial, fixed surface
 - Cylinders should be turned off at the cylinder valve when not in use and should be capped when stored
 - Compressed gas cylinders can corrode or degrade over time and should be returned to the manufacturer if they are no longer being used. This will remove any potential hazard and save the demurrage charge, which can exceed the cost of the gas over time

- **Do not use lecture bottles if other cylinders are available!** Waste lecture bottles are very difficult and costly to dispose of and they use universal threads and valves (some of which are interchangeable). Attempt to return waste lecture bottle cylinders directly to the manufacturer
- **Water/Air Reactives** Examples: sodium, potassium, calcium, aluminum tribromide, calcium oxide, acid anhydrides, metal hydrides, alkyl phosphines
- **Pyrophoric Materails** Examples: diethyl aluminum chloride, lithium, white or yellow phosphorous, trimethylaluminum
- Oils Used pump oil with organic or inorganic components
- Photographic Waste
- Spray Cans

3.2.4 Special Handling

Gas Cycinders

- Gas cylinders can be very expensive and/or impossible to dispose of through a hazardous waste company. The cylinders should be returned to the supplier, if possible. Generally a rental charge or cash deposit on the empty cylinder is included in the purchase price.
- Lecture bottles should be returned to the supplier.

Reactives and Explosives

- 1. Reactives and potential explosives require special handling for disposal. The procedure is very time consuming and expensive. To reduce disposal costs personnel should take necessary precautions to prevent the production and storage of waste explosives in laboratories. Many laboratories produce potential explosives by not following safety guidelines. Two of the most common items produced in this manner are peroxidized ethers and dry picric acid. Do not disturb potential explosives.
- 2. Peroxide forming compounds (e.g. ethyl ether, 1,4 dioxane, THF, etc.) should have a date of receipt and a date of opening on the container. Discard within six months if opened or one year if unopened.
- 3. Ensure that picric acid always contains at least 10% water.

Unknowns

- 1. Unknown wastes are handled on a case by case basis and can be very expensive to dispose of. Please ensure that all chemicals are identified, properly labeled, and expiration dates are observed.
- 2. Unknown materials cannot be disposed of until a sample has been analyzed. Every possible effort should be made to identify each waste. Unknowns can be accepted conditionally, but may be returned to the department for chemical analysis (expenses to be paid by the department) if the hazardous waste contractor cannot categorize the waste.

3. Do not guess at the identity or create a name for an unknown. A wrongly identified waste could harm life and property. It could also subject the individual generator and the University to USEPA regulatory fines and potential lawsuits.

3.2.5 <u>Pickup for Full Waste Containers</u>

When hazardous waste containers in laboratory satellite accumulation areas are no more than 90% full:

- Complete DATE WHEN FULL on the hazardous waste label
- Complete the "Request For Hazardous Waste Disposal" form from the EHS website, www...memory...edu, and send to EHS
 - The first page of the form is for listing generator information, hazardous wastes, etc.
 - \circ $\;$ The second page has the instructions for completing the form
- Full Container Must Be Removed From Accumulation Areas Within 3 Days

3.2.6 <u>Weekly Inspection of Accumulation Areas</u>

All satellite accumulation areas **<u>should be inspected weekly</u>**. An inspection form is given in Appendix B. Weekly inspections should be documented on a form like the one found in Appendix B and records of these inspections must be kept in each lab that accumulates waste for a duration of three (3) years.

3.3 Other Waste Requirements

3.3.1 <u>Biohazardous Wastes</u>

- Red Regulated Medical Waste (RMW) bags <u>NEVER</u> go in the general trash, whether autoclaved in-house or not
- Non-RMW-contaminated syringes/sharps must be treated as if they are RMW
- Proper disposal is the Department or PI responsibility.
- Retain copies of manifests, shipping documents provided by the vendor for 3 years
- Contact EHS at 540-831-7790 for assistance

3.3.2 <u>Radioactive Wastes</u>

For disposal of radioactive wastes please contact EHS at 540-831-7790. At the time of this publication, there are no PIs authorized to possess radioactive material.

3.3.3 <u>Mixed Wastes: Chemical/Biohazardous/Radioactive</u>

Mixed Infections/Chemical Waste

Whenever possible, disinfect infectious waste at the source of generation. Contact EHS at 540-831-7790 for approved methods of disinfection.

Containers and Storage: Collect non-sharps infectious waste which is also contaminated with chemicals (mixed waste) in a red biohazard bag. After the infectious agent has been disinfected, place the red biohazard bag in a second, clear plastic bag. Add absorbent material (such as diatomaceous earth) to the second bag, sufficient to absorb fluids which may leach from the waste.

Seal and attach a completed hazardous waste label to the clear bag. On the "contents" section of the tag it is important to note both the chemical waste and the infectious waste and the disinfection method that was used.

Sharps and piercing objects contaminated with both chemicals and infectious agents are handled separately from those contaminated with chemicals only. Since they will create both a physical hazard and contamination problems if placed in regular waste bags, dispose of mixed waste sharps and piercing objects in a specially designed rigid, polyethylene sharps container.

Sharps containers must not contain free liquids (such as fully syringes). When the sharps container is full, seal and remove it from the collection area. Place the container in a clear plastic bag and seal it. Attach a hazardous waste label and list all chemical and infectious agents and the method of deactivation/disinfection used. For pickup, please follow the instructions laid out earlier in this document.

3.3.4 Ethidium Bromide

Concentrated stock solutions and gels that have not been destained must be handled as hazardous waste. (**Do not put gels down the sink drain.**) If a lab chooses to decontaminate their ethidium bromide, the filter and/or resin beads must be handled as hazardous waste.

3.3.5 Photographic and X-ray Fixer Waste

Fixers contain some silver which must be treated before it can be disposed of. Hazardous waste labels must be placed on the containers and the Request for Disposal form completed and sent to EHS for pickup. At this time, EHS is providing waste containers for bulking of Photographic Fixer waste.

3.3.6 Spray Cans

Waste spray cans still containing product are considered hazardous waste and must be disposed of through EHS. Place a completed hazardous waste label on the spray can and send in the completed Request for Disposal form to EHS.

3.3.7 <u>Reagents Used in Biological Procedures</u>

The following are reagents that contain mercury and should be managed as hazardous wastes:

• Dobbin's Reagent, Hayem's Solution, Hopkins-Cole Reagent, Hubb's Reagent, Jacquemart's Reagent, Knapp's Solution, Mercresin, Meyer's Solution, Millon's

Reagent, Morell's Solution, Nessler's Reagent, Rohrbach's Solution, Sachsse's Solution, Spiegler's Reagent, Tanret's Reagent, and Tyrosine Reagents

Other hazardous reagents include:

- Erlicki's Solution (chromium)
- Fisher's Reagent (phenyl hydrazine)
- Flemming's Solution (osmium, chromic acid)
- Folin-Dennis Solutions (mercuric cyanide)

3.3.8 Broken Glass

Broken glassware should be placed into an appropriate broken glassware container. Since they will be picked up by the custodial staff these containers should be labeled with the words "Broken Glass." **Do not place broken glassware, pipettes, or other sharp-edged materials of any type into the regular trash.**

3.4 <u>Empty Containers</u>

A container that held any hazardous waste is empty if:

- All wastes have been removed that can be removed using the practices commonly employed to remove materials from the type of container (*e.g.*, pouring, pumping, and aspirating) <u>AND</u> it does not contain acutely hazardous waste
- If the waste container held acutely hazardous waste, the container <u>MUST</u> be triple rinsed using a solvent capable of removing the residual chemical product before disposing of the container:
 - The solvent can be water or any liquid that will remove the hazardous residue in the container
 - Make sure you collect wash solvent and add to a compatible hazardous waste accumulation container in the lab

Under no circumstances may a container labeled with the <u>International Radioactive</u> <u>Symbol</u> or with the words "<u>Hazardous Waste</u>" be disposed of in the general trash.

When empty, so it is clear that the container no longer contains hazardous materials, do one of the following:

- Remove the label
- Completely deface the label with a marker
- Tape over the label
- If the container that held acutely hazardous waste is not triple rinsed, then it is **not empty** and the **CONTAINER** <u>MUST</u> have a hazardous waste label attached and be properly disposed of as hazardous waste.
- 3.5 <u>Waste Minimization</u>

Effective hazardous waste management requires not only safe, sound practices, but also requires good efforts to reduce the volume and toxicity of hazardous wastes. RU's waste minimization efforts reduce disposal, hazards, and environmental impact associated with chemical wastes. The success in minimizing hazardous wastes depends on a conscientious effort by each individual at the University. The following are some common waste minimization strategies.

3.5.1 Source Reduction

The most desirable method of waste minimization is source reduction. This is any activity that reduces or eliminates the generation of chemical hazardous waste at the source. This can be accomplished by good material management, substitution of less hazardous materials, and good laboratory procedures. Examples include:

Reducing Chemical Purchases: A substantial portion of hazardous waste produced at the University consists of unused, outdated chemicals. Careful planning of quantities of chemicals required can reduce costs to the laboratory and reduce waste volumes. Many chemicals may also degrade over time, so careful consideration of quantities purchased is important to reducing potential waste. Also, risk of accident and exposure to these chemicals and space allocations are less when handling smaller volumes of materials.

Although it may seem less expensive to buy chemicals in larger quantities, it is in fact more expensive, if the cost for disposal is taken into consideration. Some chemical manufacturers sell chemicals in smaller containers to help laboratories reduce the excess purchase of chemicals. When disposal costs are considered, it is more economical to purchase only the quantities of chemicals that will be used.

- Teaching labs should consider the use of microscale experiments
- Teaching labs should use demonstrations or video presentations as a substitute for some student experiments that generate chemical wastes
- Teaching labs should use pre-weighed or pre-measured reagent packets where waste generation is high

Substitution: A non-hazardous chemical can often be used in place of a hazardous chemical. For example, some academic laboratory procedures still specify benzene or carbon tetrachloride as reagents or solvents. These compounds often can be replaced by less hazardous materials. This results not only in safer procedures, but also in wastes that may be less hazardous in some respects. Additionally, many commercial, non-hazardous glass cleaners are available in lieu of toxic and corrosive chromic acid. Similarly, different procedures may be available which do not require the use of hazardous chemicals.

- Evaluate procedures to see if a less hazardous or non-hazardous reagent could be used
- Avoid the use of reagents containing: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver
- **SEARCH FOR A SAFER SUBSTITUTE.** Let us know if you find any not mentioned here! Call us at 540-831-7790.

For many laboratory methods, environmentally sound alternatives exist:

If You Use:	Substitute:
Xylene-, benzene-, and toluene-containing	Citric acid-based reagents (e.g. AmeriClear or
reagents in histology laboratories	Limonene-based extract)
Solvent based inks in printing operations	Soy based inks
Formaldehyde	Peracetic acid or ethanol
Mercury thermometers	Non-mercury thermometers
Solvent extraction	Solid phase or supercritical fluid extraction
Carbon tetrachloride	Cyclohexane

If You Use:	Substitute:
Sulfuric acid/potassium dichromate	• Detergents and enzymatic cleaners
(chromerge) cleaning solutions	• Ultrasonic baths (these work well for many labs)
	Alconox or similar detergents
	• Pierce RBS-35 or similar detergents
	Biodegradable surfactants
	• Potassium persulfate/sulfuric acid (sold commercially as No-Chromix)
	• Aqua regia (mixture of hydrochloric and nitric acids)
	• Potassium hydroxide/ethanol solutions (also flammable)
	Dilute hydrochloric acid
Ethidium bromide	New filtration product to concentrate solvent waste 10 times
Phosphate chloride detergents for lab glass washing	Non-phosphate, non-chloride detergents

Chemical Exchange/Redistribution: Chemical purchases can often be reduced by borrowing and sharing chemicals between laboratories. Departments are encouraged to exchange chemicals whenever possible, rather than dispose of virgin chemicals as wastes. Many of these chemicals are only partially used, have not exceeded their shelf life, and have not been altered in anyway. Others are unused and still in the original sealed container. In some cases, these chemicals can be used by someone else at the University.

- Centralize purchasing of chemicals through one person in the department or laboratory
- Date chemical containers when received so that older ones will be used first
- Keep SDSs for chemicals on file
- Inventory chemicals and identify their location at least once per year
- Update inventory when chemicals are purchased or used up

- Purchase chemicals in the smallest quantities needed
- Label all chemical containers to prevent the generation of unknowns

"Less Is Better" Publication: The American Chemical Society has a laboratory waste minimization publication entitled, "Less is Better." This web document (available on our web page and at http://www.acs.org/content/dam/acsorg/about/governance/committees/chemicalsafety/publications/less-is-better.pdf) presents more details on laboratory chemical waste minimization strategies outlined in this section.

3.5.2 <u>Recycling</u>

The second most desirable approach is recycling. When a waste material is used for another purpose, treated and reused in the same process, or reclaimed for another process, this is called recycling. The following are examples:

- When solvent is used for cleaning purposes, use contaminated solvent for initial cleaning and fresh solvent for final cleaning.
- Recover, redistill, and reuse your organic solvents whenever possible
- Purchase compressed gas cylinders (including lecture bottles) only from manufacturers who will accept the return of partially full or empty cylinders
- Do not contaminate used oil with solvents because this prevents the oil from being recycled

3.5.3 Process Modification

The third basic way to minimize waste is to modify processes, where practical. To the extent that it DOES not affect vital research or teaching, modify experiments to decrease the quantity of hazardous chemicals used and generated. Micro analysis techniques can greatly reduce the amount of waste generated. An example of this is the use of microscale chemistry in entry level teaching laboratories. Also, new equipment can reduce the amount of waste generated. For example, new high performance liquid chromatography (HPLC) machines use microprocessors to reduce the amount of waste generated. Contact peers or professional organizations for the latest pollution prevention techniques.

3.6 <u>Emergency and Spill Response</u>

Quick Reference for Chemical Spill Emergency Procedures

- Evacuate
 - Leave the spill area; alert others in the area and direct/assist them in leaving
 - Without endangering yourself: remove victims to fresh air, remove contaminated clothing and flush contaminated skin and eyes with water for 15 minutes. If anyone has been injured or exposed to toxic chemicals or chemical vapors, call the Radford University Police Department (RUPD) at 540-831-5500 and request medical attention immediately
- Confine

- Close doors and isolate the area. Prevent people from entering the spill area
- Report
 - From a safe place, call RUPD at 540-831-5500
 - Report the emergency and give your name, phone and location, locations of the spill, the name and amount of material spilled, extent of injuries, and the safest route to the spill
 - The Fire Department Hazardous Materials (HazMat) team will clean up or stabilize spills which are considered high hazard (fire, health, or reactivity hazard). In the case of a small spill and low hazard situation, EHS will advise you on what precautions and protective equipment to use
 - If you have any doubt about whether a spill can be safely and effectively cleaned up by staff in the lab, call RUPD at 540-831-5500 immediately
- Secure
 - Until emergency response personnel arrive: block off areas leading to the spill, lock doors, post signs and warning tape, and alert others of the spill
 - Post staff by commonly used entrances to the area to direct people to use other routes

3.6.1 <u>Chemical Spill Emergency Procedures</u>

Evacuate

- 1. **Remove People From The Area:** As you leave an area involved in a chemical spill, assist people exiting the area. Never enter a chemical spill area where you may place your health in jeopardy Call the RUPD at 540-831-5500 for assistance.
 - a. Evacuate personnel from the spill area and close doors
 - b. If safe to do so, shut off electrical equipment as you leave the area
 - c. Direct personnel to nearest fire exit. Do not use elevators
 - d. Attend to victims
 - e. Alert neighbors

Caution: Just as you are not to re-enter a burning building, **DO NOT go back in to an area where a chemical spill has occurred!** In many documented cases, rescuers not wearing proper protective equipment have been overcome by toxic or asphyxiating fumes trying to rescue other victims and died as a result. Do not make this mistake!

- 2. First aid: Remove victims from spill area to fresh air, *but do not endanger your own life by entering areas with toxic gases*
 - a. Immediately remove contaminated clothing
 - b. Flush skin or eyes with running water for 15 minutes
 - c. Get medical attention for victims

Caution: Flush skin and/or eyes with running water for at least 15 minutes. (You may not feel any immediate effects from chemical spills, but it is very important to wash quickly and thoroughly because contact with many chemicals can cause severe tissue damage that is not apparent until hours later.)

- d. Chemical spills over large body areas:
 - i. Remove contaminated clothing while under shower
 - ii. Flush affected body area with water for at least 15 minutes
 - iii. Resume water wash if pain returns
 - iv. Wash off chemicals with mild detergent and water; do not use neutralizing chemicals, unguents, creams, lotions or salves
 - v. Get immediate medical help
 - vi. Make sure medical personnel understand exactly what chemicals are involved
- e. Victims of Bromine spills
 - i. Flush with cold water; apply compress saturated with a dilute sodium thiosulfate solution
 - ii. Get immediate medical help
- f. Victims of Hydrogen Fluoride (HF) spills
 - i. Flush with cool water until any whitening of tissue disappears
 - ii. Swath injured area with soaking wet, iced cloths
 - iii. If calcium gluconate cream or salve is available, wash skin with running water for five minutes, then cover area with cream
 - iv. Get immediate medical help

Confine

- 1. Close fire doors
- 2. Isolate the area
- 3. Establish exhaust ventilation
- 4. Vent fumes only to outside of the building
- 5. Open windows, if possible, without exposing yourself to more fumes
- 6. If vapor or gases are in a room which is not vented to the outside of the building, close off the room

Report

- 1. Call RUPD at 540-831-5500 for all chemical spills that:
 - a. Involve injury requiring medical treatment
 - b. **Involve fire** or explosion hazards
 - c. Are potentially life threatening
 - d. Are **larger than one liter** or cover a large area
- 2. The type of information you will need to provide when you call RUPD consist of the following:
 - a. State that this is an emergency
 - b. Give your name, telephone number, and location
 - c. Tell the location of the incident
 - d. Tell the time and type of incident
 - e. Give the name and quantity of material involved
 - f. Provide the extent of injuries, if any
 - g. Explain the possible hazards to human health or the environment

h. Warn emergency responders of any other hazards they may encounter, such as large quantities of stored chemicals (particularly flammables, oxidizers, and airborn toxic or irritant materials), radioactive materials, biohazards, mechanical hazards, etc. Outline the safest route to approach the spill

Secure

Until emergency responders arrive on the scene, you and your staff will need to block off entrances to the spill location and prevent people from entering the contaminated area.

- 1. Lock doors leading to the chemical spill (while keeping keys handy for emergency personnel) and post signs on doors warning of the spill
- 2. Tape or rope off stairwells, corridors, and elevators leading to the spill and hang signs on the tape
- 3. Post staff by commonly used entrances to the spill location, so they can warn people to use other routes

Clean Up

Every laboratory or suite of laboratories (interconnected labs that do not require walking in a hallway to get to) should have access to a fully-stocked spill kit to aid in the containment and cleanup of chemical spills. Spill kits at the minimum should contain the following:

- (1) 5-gallon plastic pail
- (1) pair of neoprene gloves
- (2) disposable plastic trash bags
- (2) cable ties (for sealing trash bags)
- (1) pair of latex booties
- (1) Tyvek coverall, size XXXL
- (10) universal absorbent pads
- (1) pair of chemical splash goggles

Contact EHS at 540-831-7790 for assistance with spill kits.

The following are general guidelines for spill cleanup:

- 1. EHS and/or the Fire Department HazMat Team will clean up or stabilize spills which are considered a high hazard (fire, health, or reactivity hazard).
- 2. You should clean up a low hazard spill for which you have proper training and proper protective equipment. In general, small spills should be absorbed, neutralized, and collected immediately. Consult the SDS for specific instructions on spill response. The instructions below are general guidelines only and may need to be modified to safely handle the spill.
 - a. <u>Liquids</u> should be covered with spill universal absorbent pads, vermiculite, or equivalent absorbent to contain and absorb the material. **DO NOT use a combustible absorbent for cleaning up oxidizer spills!** Absorb all liquid in the

pads or absorbent and put the absorbent into a heavy-walled plastic trash bag or other suitable container and seal. Put the plastic bag or container in a second plastic bag or the 5-gallon pail that is part of the spill kit and seal. Treat the contents as a hazardous waste and follow the procedures outlined earlier in this document.

- b. <u>Solids</u> should be carefully pushed with absorbent pads or swept into a pile and transferred to a plastic trash bag or other suitable container and sealed. Put the plastic bag or container in a second plastic bag or the 5-gallon pail that is part of the spill kit and seal. Treat the contents as a hazardous waste and follow the procedures outlined earlier in this document.
- c. <u>Decontamination</u> of the spill area with a mild soap solution or sodium bicarbonate (for acid neutralization) may also be necessary. Questions, regarding procedures can be directed to EHS at 540-831-7790.

If you have any doubt about whether a spill can be safely and effective cleaned up by staff in the lab, call RUPD at 540-831-5500 immediately.

Management of Materials from Spill Cleanup: Materials that are generated as a result of spill cleanup are considered to be hazardous waste if the original material when disposed of would be hazardous waste. These materials must be pleace into appropriate sealed containers and must be managed as any other hazardous waste.

3.6.2 General Emergency Procedures

An emergency condition is any SPILL, LEAK, FIRE, or other uncontrolled release that presents a hazard to human health or the environment. Any person discovering an imminent or actual emergency, which is not readily controllable with the training and equipment on hand MUST CONTACT RUPD at 540-831-5500.

Emergency Procedures for a chemical spill are given in the previous section.

The following are general fire safety procedures:

- ✓ Know where the "Pull Boxes" are
- ✓ Know at least two (2) ways to get out of the building
- ✓ DO NOT use the elevator
- ✓ Close all doors behind you
- \checkmark <u>ALWAYS</u> exit the building when the alarm is ringing
- ✓ Have a rally point or assembly area where all personnel in your lab will meet if you have to leave the building for an emergency

Follow the R.A.C.E. procedure:

- ✓ Remove anyone from danger
- ✓ Alarm: Pull Fire Alarm Box or call RUPD at 540-831-5500
- ✓ Confine: Close all doors

✓ Extinguish or Evacuate

3.7 <u>Training</u>

Hazardous Waste Training (also known as RCRA Training) is required if you:

- Decide what is a hazardous waste
- Add hazardous waste into accumulation containers
- Transport waste from accumulation points
- Inspect hazardous waste storage areas
- Respond to spill involving hazardous wastes

Training should be for new employees and refreshed annually thereafter.

EHS will provide RCRA Training upon request by a Department or School. The training meets all USEPA and Virginia DEQ hazardous waste requirement and takes about 1.5 hours to complete. Participants are required to provide their RU ID number at course registration.

4.0 Document Management

This guidebook shall be reviewed every two years, or as changes require.

5.0 Associated Documents

The following are a listing of associated documents relevant to this guidebook:

- "Safety Policy," Environmental Health and Safety, Radford University
- 40 Code of Federal Regulations Part 260 et seq.
- 9VAC20-60

APPENDIX A TOXIC HAZARDOUS WASTES

TOXIC HAZARDOUS WASTES

8 HEAVY METALS	22 ORGANIC CHEMICALS
ARSENIC	BENZENE
CADMIUM	CARBON TETRACHLORIDE
LEAD	CHLORDANE
SELENIUM	CHLOROBENZENE
BARIUM	CHLOROFORM
CHROMIUM	O-CRESOL
MERCURY	M-CRESOL
SILVER	P-CRESOL
	CRESOL
10 PESTICIDES	1,4-DICHLOROBENZENE
2,4-D	1,2-DICHLOROETHANE
ENDRIN	1,1-DICHLOROETHYLENE
HEPTACHLOR (& ITS EPOXIDE)	2,4-DINITROTOLUENE
HEXACHLOROBENZENE	METHYL ETHYL KETONE
HEXACHLOROBUTADIENE	NITROBENZENE
HEXACHLOROETHANE	PENTACHLOROPHENOL
LINDANE	PYRIDINE
METHOXYCHLOR	TETRACHLOROETHYLENE
TOXAPHENE	TRICHLOROETHYLENE
2,4,5-TP (SILVEX)	2,4,5-TRICHLOROPHENOL
	2,4,6-TRICHLOROPHENOL
	VINYL CHLORIDE

APPENDIX B

HAZARDOUS WASTE WEEKLY INSPECTION SHEET

Date	Containers Labeled?	Containers Capped?	Containers undamaged, free of leaks and spills?	Containers properly stored within secondary containment?	Incompatible wastes segregated in separate secondary containment?	Base under containers in good condition?	No full containers with dates more than 3 days old?	Comments	Initials
-									

Satellite Accumulation Area/Hazardous Waste Weekly Inspection Sheet

APPENDIX C

U & P LISTED HAZARDOUS WASTE

These wastes and their corresponding EPA Hazardous Waste Numbers are:

Hazardous waste No.	Chemical abstracts No.	Substance
P023	107-20-0	Acetaldehyde, chloro-
P002	591-08-2	Acetamide, N-(aminothioxomethyl)-
P057	640–19–7	Acetamide, 2-fluoro-
P058	62-74-8	Acetic acid, fluoro-, sodium salt
P002	591-08-2	1-Acetyl-2-thiourea
P003	107-02-8	Acrolein
P070	116-06-3	Aldicarb
P203	1646884	Aldicarb sulfone.
P004	309-00-2	Aldrin
P005	107-18-6	Allyl alcohol
P006	20859-73-8	Aluminum phosphide (R,T)
P007	2763-96-4	5-(Aminomethyl)-3-isoxazolol
P008	504-24-5	4-Aminopyridine
P009	131-74-8	Ammonium picrate (R)
P119	7803–55–6	Ammonium vanadate
P099	506-61-6	Argentate(1-), bis(cyano-C)-, potassium
P010	7778-39-4	Arsenic acid H ₃ AsO ₄
P012	1327-53-3	Arsenic oxide As ₂ O ₃
P011	1303-28-2	Arsenic oxide As ₂ O ₅
P011	1303-28-2	Arsenic pentoxide
P012	1327-53-3	Arsenic trioxide
P038	692-42-2	Arsine, diethyl-
P036	696–28–6	Arsonous dichloride, phenyl-
P054	151–56–4	Aziridine

P067	75–55–8	Aziridine, 2-methyl-
P013	542-62-1	Barium cyanide
P024	106-47-8	Benzenamine, 4-chloro-
P077	100-01-6	Benzenamine, 4-nitro-
P028	100-44-7	Benzene, (chloromethyl)-
P042	51-43-4	1,2-Benzenediol, 4-[1-hydroxy-2-(methylamino)ethyl]-, (R)-
P046	122-09-8	Benzeneethanamine, alpha, alpha-dimethyl-
P014	108-98-5	Benzenethiol
P127	1563-66-2	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate.
P188	57–64–7	Benzoic acid, 2-hydroxy-, compd. with (3aS-cis)-1,2,3,3a,8,8a- hexahydro-1,3a,8-trimethylpyrrolo[2,3-b]indol-5-yl methylcarbamate ester (1:1).
P001	181-81-2	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, & salts, when present at concentrations greater than 0.3%
P028	100-44-7	Benzyl chloride
P015	7440-41-7	Beryllium powder
P017	598-31-2	Bromoacetone
P018	357-57-3	Brucine
P045	39196–18–4	2-Butanone, 3,3-dimethyl-1-(methylthio)-, O-[(methylamino)carbonyl] oxime
P021	592-01-8	Calcium cyanide
P021	592-01-8	Calcium cyanide Ca(CN) ₂
P189	55285-14-8	Carbamic acid, [(dibutylamino)- thio]methyl-, 2,3-dihydro-2,2- dimethyl- 7-benzofuranyl ester.
P191	644–64–4	Carbamic acid, dimethyl-, 1-[(dimethyl-amino)carbonyl]- 5-methyl- 1H- pyrazol-3-yl ester.
P192	119–38–0	Carbamic acid, dimethyl-, 3-methyl-1- (1-methylethyl)-1H- pyrazol-5- yl ester.
P190	1129–41–5	Carbamic acid, methyl-, 3-methylphenyl ester.
P127	1563-66-2	Carbofuran.
P022	75–15–0	Carbon disulfide
P095	75–44–5	Carbonic dichloride

P189	55285-14-8	Carbosulfan.
P023	107-20-0	Chloroacetaldehyde
P024	106-47-8	p-Chloroaniline
P026	5344-82-1	1-(o-Chlorophenyl)thiourea
P027	542-76-7	3-Chloropropionitrile
P029	544-92-3	Copper cyanide
P029	544-92-3	Copper cyanide Cu(CN)
P202	64-00-6	m-Cumenyl methylcarbamate.
P030		Cyanides (soluble cyanide salts), not otherwise specified
P031	460-19-5	Cyanogen
P033	506-77-4	Cyanogen chloride
P033	506-77-4	Cyanogen chloride (CN)Cl
P034	131-89-5	2-Cyclohexyl-4,6-dinitrophenol
P016	542-88-1	Dichloromethyl ether
P036	696–28–6	Dichlorophenylarsine
P037	60-57-1	Dieldrin
P038	692-42-2	Diethylarsine
P041	311-45-5	Diethyl-p-nitrophenyl phosphate
P040	297–97–2	O,O-Diethyl O-pyrazinyl phosphorothioate
P043	55-91-4	Diisopropylfluorophosphate (DFP)
P004	309-00-2	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexa- chloro- 1,4,4a,5,8,8a,-hexahydro-, (1alpha,4alpha,4abeta,5alpha,8alpha,8abeta)-
P060	465-73-6	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexa- chloro- 1,4,4a,5,8,8a-hexahydro-, (1alpha,4alpha,4abeta,5beta,8beta,8abeta)-
P037	60–57–1	2,7:3,6-Dimethanonaphth[2,3-b]oxirene, 3,4,5,6,9,9-hexachloro- 1a,2,2a,3,6,6a,7,7a-octahydro-, (1aalpha,2beta,2aalpha,3beta,6beta,6aalpha,7beta, 7aalpha)-
P051	¹ 72–20–8	2,7:3,6-Dimethanonaphth [2,3-b]oxirene, 3,4,5,6,9,9-hexachloro- 1a,2,2a,3,6,6a,7,7a-octahydro-, (1aalpha,2beta,2abeta,3alpha,6alpha,6abeta,7beta, 7aalpha)-, & metabolites
P044	60-51-5	Dimethoate

P046	122-09-8	alpha,alpha-Dimethylphenethylamine
P191	644-64-4	Dimetilan.
P047	¹ 534–52–1	4,6-Dinitro-o-cresol, & salts
P048	51-28-5	2,4-Dinitrophenol
P020	88-85-7	Dinoseb
P085	152–16–9	Diphosphoramide, octamethyl-
P111	107-49-3	Diphosphoric acid, tetraethyl ester
P039	298-04-4	Disulfoton
P049	541-53-7	Dithiobiuret
P185	26419–73–8	1,3-Dithiolane-2-carboxaldehyde, 2,4-dimethyl-, O- [(methylamino)- carbonyl]oxime.
P050	115–29–7	Endosulfan
P088	145-73-3	Endothall
P051	72–20–8	Endrin
P051	72–20–8	Endrin, & metabolites
P042	51-43-4	Epinephrine
P031	460-19-5	Ethanedinitrile
P194	23135-22-0	Ethanimidothioic acid, 2-(dimethylamino)-N-[[(methylamino) carbonyl]oxy]-2-oxo-, methyl ester.
P066	16752–77–5	Ethanimidothioic acid, N-[[(methylamino)carbonyl]oxy]-, methyl ester
P101	107-12-0	Ethyl cyanide
P054	151–56–4	Ethyleneimine
P097	52-85-7	Famphur
P056	7782-41-4	Fluorine
P057	640–19–7	Fluoroacetamide
P058	62-74-8	Fluoroacetic acid, sodium salt
P198	23422-53-9	Formetanate hydrochloride.
P197	17702-57-7	Formparanate.
P065	628-86-4	Fulminic acid, mercury(2+) salt (R,T)
P059	76–44–8	Heptachlor

P062	757–58–4	Hexaethyl tetraphosphate
P116	79–19–6	Hydrazinecarbothioamide
P068	60-34-4	Hydrazine, methyl-
P063	74–90–8	Hydrocyanic acid
P063	74–90–8	Hydrogen cyanide
P096	7803–51–2	Hydrogen phosphide
P060	465-73-6	Isodrin
P192	119–38–0	Isolan.
P202	64-00-6	3-Isopropylphenyl N-methylcarbamate.
P007	2763-96-4	3(2H)-Isoxazolone, 5-(aminomethyl)-
P196	15339–36–3	Manganese, bis(dimethylcarbamodithioato-S,S')-,
P196	15339–36–3	Manganese dimethyldithiocarbamate.
P092	62-38-4	Mercury, (acetato-O)phenyl-
P065	628-86-4	Mercury fulminate (R,T)
P082	62-75-9	Methanamine, N-methyl-N-nitroso-
P064	624-83-9	Methane, isocyanato-
P016	542-88-1	Methane, oxybis[chloro-
P112	509-14-8	Methane, tetranitro- (R)
P118	75–70–7	Methanethiol, trichloro-
P198	23422–53–9	Methanimidamide, N,N-dimethyl-N'-[3-[[(methylamino)- carbonyl]oxy]phenyl]-, monohydrochloride.
P197	17702–57–7	Methanimidamide, N,N-dimethyl-N'-[2-methyl-4- [[(methylamino)carbonyl]oxy]phenyl]-
P050	115–29–7	6,9-Methano-2,4,3-benzodioxathiepin, 6,7,8,9,10,10- hexachloro-1,5,5a,6,9,9a-hexahydro-, 3-oxide
P059	76–44–8	4,7-Methano-1H-indene, 1,4,5,6,7,8,8-heptachloro- 3a,4,7,7a-tetrahydro-
P199	2032-65-7	Methiocarb.
P066	16752-77-5	Methomyl
P068	60-34-4	Methyl hydrazine
P064	624-83-9	Methyl isocyanate

P069	75-86-5	2-Methyllactonitrile
P071	298-00-0	Methyl parathion
P190	1129-41-5	Metolcarb.
P128	315-8-4	Mexacarbate.
P072	86-88-4	alpha-Naphthylthiourea
P073	13463-39-3	Nickel carbonyl
P073	13463-39-3	Nickel carbonyl Ni(CO) ₄ , (T-4)-
P074	557-19-7	Nickel cyanide
P074	557-19-7	Nickel cyanide Ni(CN) ₂
P075	¹ 54–11–5	Nicotine, & salts

P188	57–64–7	Benzoic acid, 2-hydroxy-, compd. with (3aS-cis)-1,2,3,3a,8,8a- nexahydro-1,3a,8-trimethylpyrrolo[2,3-b]indol-5-yl methylcarbamate ester (1:1)	
P188	57–64–7	Physostigmine salicylate	
P189	55285-14-8	Carbamic acid, [(dibutylamino)-thio]methyl-, 2,3-dihydro-2,2- dimethyl-7-benzofuranyl ester	
P189	55285-14-8	Carbosulfan	
P190	1129–41–5	Carbamic acid, methyl-, 3-methylphenyl ester	
P190	1129-41-5	Metolcarb	
P191	644–64–4	Carbamic acid, dimethyl-, 1-[(dimethyl-amino)carbonyl]-5-methyl- H-pyrazol-3-yl ester	
P191	644–64–4	Dimetilan	
P192	119–38–0	Carbamic acid, dimethyl-, 3-methyl-1-(1-methylethyl)-1H-pyrazol-5- 1 ester	
P192	119–38–0	Isolan	
P194	23135-22-0	Ethanimidthioic acid, 2-(dimethylamino)-N-[[(methylamino) carbonyl]oxy]-2-oxo-, methyl ester	
P194	23135-22-0	Oxamyl	
P196	15339–36–3	Manganese, bis(dimethylcarbamodithioato-S,S')-,	
P196	15339-36-3	Manganese dimethyldithiocarbamate	
P197	17702-57-7	Formparanate	
P197	17702-57-7	Methanimidamide, N,N-dimethyl-N'-[2-methyl-4- [[(methylamino)carbonyl]oxy]phenyl]-	
P198	23422-53-9	Formetanate hydrochloride	
P198	23422-53-9	Methanimidamide, N,N-dimethyl-N'-[3-[[(methylamino)- carbonyl]oxy]phenyl]-monohydrochloride	
P199	2032-65-7	Methiocarb	

P199	2032-65-7	Phenol, (3,5-dimethyl-4-(methylthio)-, methylcarbamate	
P201	2631-37-0	Phenol, 3-methyl-5-(1-methylethyl)-, methyl carbamate	
P201	2631-37-0	Promecarb	
P202	64-00-6	m-Cumenyl methylcarbamate	
P202	64006	3-Isopropylphenyl N-methylcarbamate	
P202	64006	Phenol, 3-(1-methylethyl)-, methyl carbamate	
P203	1646884	Aldicarb sulfone	
P203	1646-88-4	Propanal, 2-methyl-2-(methyl-sulfonyl)-, O-[(methylamino)carbonyl] oxime	
P204	57-47-6	Physostigmine	
P204	57–47–6	Pyrrolo[2,3-b]indol-5-ol, 1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethyl-, methylcarbamate (ester), (3aS-cis)-	
P205	137-30-4	Zinc, bis(dimethylcarbamodithioato-S,S')-,	
P205	137-30-4	Ziram	

¹CAS Number given for parent compound only.

(f) The commercial chemical products, manufacturing chemical intermediates, or offspecification commercial chemical products referred to in paragraphs (a) through (d) of this section, are identified as toxic wastes (T), unless otherwise designated and are subject to the small quantity generator exclusion defined in § 261.5 (a) and (g).

[*Comment:* For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability) and C (Corrosivity). Absence of a letter indicates that the compound is only listed for toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by Hazardous Waste Number.]

These wastes and their corresponding EPA Hazardous Waste Numbers are:

Hazardous waste No.	Chemical abstracts No.	Substance
U394	30558– 43–1	A2213.
U001	75–07–0	Acetaldehyde (I)

U225	75–25–2	Bromoform
U225	75-25-2	Methane, tribromo-
U226	71–55–6	Ethane, 1,1,1-trichloro-
U226	71–55–6	Methyl chloroform
U226	71–55–6	1,1,1-Trichloroethane

U227	79–00–5	Ethane, 1,1,2-trichloro-		
U227	79–00–5	1,1,2-Trichloroethane		
U228	79–01–6	Ethene, trichloro-		
U228	79–01–6	Trichloroethylene		
U234	99–35–4	Benzene, 1,3,5-trinitro-		
U234	99–35–4	1,3,5-Trinitrobenzene (R,T)		
U235	126-72-7	1-Propanol, 2,3-dibromo-, phosphate (3:1)		
U235	126-72-7	Tris(2,3-dibromopropyl) phosphate		
U236	72–57–1	2,7-Naphthalenedisulfonic acid, 3,3'-[(3,3'- dimethyl[1,1'-biphenyl]-4,4'- diyl)bis(azo)bis[5-amino-4-hydroxy]-, tetrasodium salt		
U236	72–57–1	Trypan blue		
U237	66–75–1	2,4-(1H,3H)-Pyrimidinedione, 5-[bis(2- chloroethyl)amino]-		
U237	66–75–1	Uracil mustard		
U238	51-79-6	Carbamic acid, ethyl ester		
U238	51-79-6	Ethyl carbamate (urethane)		
U239	1330–20– 7	Benzene, dimethyl- (I,T)		
U239	1330–20– 7	Xylene (I)		
U240	¹ 94–75–7	Acetic acid, (2,4-dichlorophenoxy)-, salts & esters		
U240	¹ 94–75–7	2,4-D, salts & esters		
U243	1888–71– 7	Hexachloropropene		
U243	1888–71–	1-Propene, 1,1,2,3,3,3-hexachloro-		
U244	137–26–8	Thioperoxydicarbonic diamide $[(H_2N)C(S)]_2S_2$, tetramethyl-		
U244	137–26–8	Thiram		

U246	506-68-3	Cyanogen bromide (CN)Br			
U247	72–43–5	Benzene, 1,1'-(2,2,2- trichloroethylidene)bis[4- methoxy-			
U247	72–43–5	Methoxychlor			
U248	¹ 81–81–2	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3- oxo-1-phenyl-butyl)-, & salts, when present at concentrations of 0.3% or less			
U248	¹ 81–81–2	Warfarin, & salts, when present at concentrations of 0.3% or less			
U249	1314–84– 7	Zinc phosphide Zn ₃ P ₂ , when present at concentrations of 10% or less			
U271	17804– 35–2	Benomyl			
U271	17804– 35–2	Carbamic acid, [1-[(butylamino)carbonyl]- 1H-benzimidazol-2-yl]-, methyl ester			
U278	22781– 23–3	Bendiocarb			
U278	22781– 23–3	1,3-Benzodioxol-4-ol, 2,2-dimethyl-, methyl carbamate			
U279	63–25–2	Carbaryl			
U279	63–25–2	1-Naphthalenol, methylcarbamate			
U280	101–27–9	Barban			
U280	101–27–9	Carbamic acid, (3-chlorophenyl)-, 4-chloro- 2-butynyl ester			
U328	95–53–4	Benzenamine, 2-methyl-			
U328	95–53–4	o-Toluidine			
U353	106-49-0	Benzenamine, 4-methyl-			
U353	106–49–0	p-Toluidine			
U359	110-80-5	Ethanol, 2-ethoxy-			
U359	110-80-5	Ethylene glycol monoethyl ether			
U364	22961– 82–6	Bendiocarb phenol			

U364	22961– 82–6	1,3-Benzodioxol-4-ol, 2,2-dimethyl-,		
U367	1563–38– 8	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-		
U367	1563–38– 8	Carbofuran phenol		
U372	10605– 21–7	Carbamic acid, 1H-benzimidazol-2-yl, methyl ester		
U372	10605– 21–7	Carbendazim		
U373	122-42-9	Carbamic acid, phenyl-, 1-methylethyl ester		
U373	122-42-9	Propham		
U387	52888– 80–9	Carbamothioic acid, dipropyl-, S- (phenylmethyl) ester		
U387	52888– 80–9	Prosulfocarb		
U389	2303–17– 5	Carbamothioic acid, bis(1-methylethyl)-, S- (2,3,3-trichloro-2-propenyl) ester		
U389	2303–17– 5	Triallate		
U394	30558– 43–1	A2213		
U394	30558– 43–1	Ethanimidothioic acid, 2-(dimethylamino)- N-hydroxy-2-oxo-, methyl ester		
U395	5952–26– 1	Diethylene glycol, dicarbamate		
U395	5952–26– 1	Ethanol, 2,2'-oxybis-, dicarbamate		
U404	121-44-8	Ethanamine, N,N-diethyl-		
U404	121-44-8	Triethylamine		
U409	23564– 05–8	Carbamic acid, [1,2-phenylenebis (iminocarbonothioyl)]bis-, dimethyl ester		
U409	23564- 05-8	Thiophanate-methyl		

U410	59669– 26–0	Ethanimidothioic acid, N,N'- [thiobis[(methylimino)carbonyloxy]]bis-, dimethyl ester		
U410	59669– 26–0	Thiodicarb		
U411	114–26–1	Phenol, 2-(1-methylethoxy)-, methylcarbamate		
U411	114-26-1	Propoxur		
See F027	93-76-5	Acetic acid, (2,4,5-trichlorophenoxy)-		
See F027	87-86-5	Pentachlorophenol		
See F027	87-86-5	Phenol, pentachloro-		
See F027	58-90-2	Phenol, 2,3,4,6-tetrachloro-		
See F027	95–95–4	Phenol, 2,4,5-trichloro-		
See F027	88-06-2	Phenol, 2,4,6-trichloro-		
See F027	93-72-1	Propanoic acid, 2-(2,4,5-trichlorophenoxy)-		
See F027	93-72-1	Silvex (2,4,5-TP)		
See F027	93–76–5	2,4,5-T		
See F027	58-90-2	2,3,4,6-Tetrachlorophenol		
See F027	95–95–4	2,4,5-Trichlorophenol		
See F027	88-06-2	2,4,6-Trichlorophenol

RECORD OF HAZARDOUS WASTE ACCUMULATION

RECORD OF HAZARDOUS WASTE ACCUMULATION

Container Description:					
DESCRIPTION OF WASTE ADDED	AMOUNT	INITIALS	DATE ADDED		
Special Notes or Handling Instructions:					

Instructions on reverse side.

Guidelines for Chemical Waste Disposal

Preparing the Waste

- Separate solids from liquids. All liquids must be free of solid material. If solids cannot be separated from liquids the identification and quality of the solid must be listed on the "Request for Disposal" form. Every effort should be made to separate solids from liquids.
- 2) **Waste Consolidation.** Every effort must be made by the waste generator to consolidate same-type waste into as few containers as possible.
- 3) **Packaging the Waste.** Make sure containers are compatible with the waste inside. If not, transfer to a new container. The container must be leak-free, have a tight screw cap, and be clean on the outside.
- 4) Label the Container. Make sure the containers are labeled with: (1) the words "Hazardous Waste"; (2) a complete list of contents; (3) the date that the container was filled or date of the "Request for Disposal"; (4) the volume or weight; (5) the department. The information on the label must agree with the information on the "Request for Disposal" form.
- 5) **Prepare Waste for Transport.** The waste shall be transported in an EHS vehicle only. Do not mix incompatible waste.
- 6) Fill Out the Request Form as Outlined on the Request for Hazardous Waste Disposal Form.

Chemical Waste Disposal Golden Rules

- 1) Provide a secondary container for waste collection containers.
- 2) Keep waste containers closed at all times except when adding or removing waste.
- 3) Position containers so that waste labels are visible (face forward).
- 4) Place supplied "Hazardous Waste" labels on all waste containers and indicate the contents and the nature of the hazard.
- 5) Maintain ten percent free space in waste containers to allow for expansion.
- 6) Submit the completed Request for Hazardous Waste Dipsoal Form to EHS when the containers are full (90%).
- 7) Attend and document all annual training for all persons generating hazardous wastes.
- 8) Conduct weekly inspections of hazardous waste collection area and maintain an inspection log.
- 9) Post the name and phone numbers for responsible person to contact 24 hours a day in case of an emergency.
- 10) Use only collection containers that are capable of safely storing the waste and that are in good condition.
